person can be indirectly or directly identified through the name, address or identification number. Confidential data cannot be used to establish the rights and impose an obligation to a reporting unit. Responsible producers of statistics can make accessible individual data without the identifiers to R&D institutions upon their written request, but the former must keep track of such users as well as of the purpose for which they provide the data. The protection of confidential data is secured by restricting the access to confidential data because it is limited to persons that, during their work, produce official statistics as much as those data are necessary for producing official statistics. Responsible producers of official statistics are due to take all stipulated administrative, technical and organizational actions to protect the confidential data against illegal access, disclosure or use of those data.
